Abstract - This study examines the batik industry in Solo, Indonesia, which serves as a significant contributor to the national economy, particularly within the textile and apparel sector. Founded in 1998, the company specializes in exporting traditionally crafted batik fabrics produced through the cap method, primarily focusing on business-to-business transactions in key markets such as the United States, Europe, and Australia. Despite its rich heritage, the industry faces challenges related to workforce sustainability, including an aging artisan population and a lack of interest among younger generations in pursuing careers in batik craftsmanship. Furthermore, the absence of a clearly defined vision, mission, and formal organizational values impedes effective management and strategic planning. Utilizing TOWS analysis, this study identifies strategic approaches to enhance the company's competitiveness and sustainability. Recommendations include the development of comprehensive training programs for young artisans, investment in technology for tool production, the creation of a marketing strategy that emphasizes the cultural significance of batik, and the formulation of a crisis management plan to address labor shortages and market fluctuations. Through these initiatives, the batik industry in Solo can not only preserve its cultural heritage but also ensure its future growth and sustainability in the increasingly competitive global market.

I. INTRODUCTION

Founded in 1998, the company operates in the batik textile industry, specializing in the export of traditionally crafted batik fabrics produced through the cap method. The business model emphasizes business-to-business transactions, with key export markets including the United States, Germany, France, Greece, Australia, China, Hong Kong, and the United Kingdom. A distinctive value of the company's batik fabrics is the handcrafted production process performed by skilled artisans, resulting in subtle variations in each fabric, which enhance the overall appeal of the product. The company's primary offerings include batik cotton fabrics, sold in sheets tailored to client specifications. Additional products consist of Batik Men's Shirts, resembling Hawaiian-style shirts that are particularly popular during the summer or holiday seasons, as well as fabric cuts that are favored by quilting enthusiasts in the United States.

II. INTEGRATION OF TOWS IN STRATEGIC PLANNING

Strategic planning is a structured and methodical process employed by organizations to articulate their long-term direction, establish overarching strategic goals and objectives, and devise the requisite steps or actions to realize these objectives. This process entails a comprehensive analysis of both internal and external environments, the identification of opportunities and threats, as well as a thorough evaluation of the organization’s strengths and weaknesses. Consequently, the purpose of strategic planning is to ensure that the organization is well-positioned to effectively respond to changes in the business environment, capitalize on opportunities, and address challenges in order to achieve a sustainable competitive advantage and long-term growth Thompson (2022). Following the discussion of strategic planning, it is essential to emphasize that an effective strategic plan necessitates a TOWS analysis.TheTOWS analysis is a strategic tool utilized to evaluate the relationship between internal and external factors that influence an organization. The acronym TOWS encompasses Threats, Opportunities, Weaknesses, and Strengths. This tool aids organizations in formulating effective strategies based on the interplay of these factors. The components of TOWS analysis include Strengths, which refer to internal factors that provide competitive advantages, such as resources and skills; Weaknesses, which denote internal factors that pose obstacles, such as a lack of resources or inadequate skills; Opportunities, which are external factors that can be leveraged, such as favorable market trends; and Threats, which represent external factors that impede the achievement of goals, such as increased competition. The TOWS analysis process commences with the identification of strengths and weaknesses through internal audits, followed by the recognition of opportunities and threats through external environmental analysis. Subsequently, the TOWS Matrix is employed to align internal strengths and weaknesses with external opportunities and threats, resulting in four strategic approaches: SO (Strengths-Opportunities) to leverage strengths, ST (Strengths-Threats) to mitigate threats, WO (Weaknesses-Opportunities) to address weaknesses by capitalizing

on opportunities, and WT (Weaknesses-Threats) to diminish weaknesses and evade threats. The advantages of TOWS analysis include the development of more precise and focused strategies, ensuring consistency between strategies and both internal and external factors, and facilitating improved decision-making by providing a clear depiction of the organization's position. Consequently, TOWS analysis functions as an effective tool for formulating strategies aimed at enhancing the competitiveness and overall performance of the organization Weihrich(1982).

III. CHALLENGES AND STRATEGIC SOLUTIONS FOR SUSTAINABILITY IN THE BATIK INDUSTRY IN SOLO

The Textile and Apparel Industry subsector plays a vital role in the national economy, including in the development of batik exports from Indonesia, particularly from Solo, Central Java. In the second quarter of 2024, this sub-sector contributed 5.72 percent to the Gross Domestic Product (GDP) of the Non-Oil and Gas Processing Industry. The export performance of textiles and apparel reached US $1.77 billion and US $3.87 billion by the second quarter of 2024. The batik industry also contributed to national textile and textile product (TPT) exports, with an export value of US $8.33 million (equivalent to IDR 127 billion), despite experiencing a contraction of 8.29 percent compared to the same period in 2023. In the city of Solo, batik remains a key commodity that supports the economy and absorbs labor, although international demand has fluctuated amid global economic recovery efforts. In the first quarter of 2023, batik export performance showed a positive trend, with an export value of US $835,358.90 in January. The export graph continued to rise in March, with an export value of US $741,702.33, although not as significant as earlier in the year.The batik company in Solo faces several potential challenges and threats that need to be addressed. One of the most prominent issues is resource sustainability. This problem is clearly seen in the fact that the majority of employees are over 40 years old, which could lead to a workforce gap when they reach retirement age or pass away, as shown in Figure 1. This is due to a trend where younger generations are less interested in becoming batik artisans. This situation is exacerbated by the fact that the company’s batik stamp tool suppliers are predominantly elderly craftsmen, while the company itself has not yet been able to manufacture these tools. This condition creates potential issues in the company’s production process, as illustrated in Figure 2. In addition to resource sustainability issues, there are other challenges related to the company’s management and strategy. For instance, the company’s mission and vision do not fully incorporate the essential components that should be present in formulating these statements. Furthermore, the company has not formally articulated its organizational values, making it difficult to promote them in shaping organizational culture. The company also lacks long-term strategies and goals that can serve as a guide for future planning.

IV. TOWS ANALYSIS

By utilizing the TOWS matrix, we align the internal strengths and weaknesses with external opportunities and threats to formulate strategic recommendations:

A. SO (Strengths-Opportunities)

1. Leverage the unique quality of the handcrafted batik fabric production to market the products as premium items in markets that focus on sustainable fashion.
2. Collaborate with cultural organizations and educational institutions to promote batik as a craft, attracting young artisans to the field.

Figure 1:Employees of the company aged 40 years andolder

Figure 2:Workers who make batik stamp tools

B. ST (Strengths-Threats)

1. Utilize the established international market presence to negotiate better trade agreements and secure long-term contracts that provide stability amid

fluctuating demand.
2. Invest in marketing strategies that highlight the uniqueness and cultural significance of batik, distinguishing it from competitors.

C. WO (Weaknesses-Opportunities)

1. Address the issue of an aging workforce by implementing apprenticeship programs that encourage younger generations to learn batik craftsmanship.
2. Develop partnerships with local universities or vocational schools to create training programs for the production of batik tools and materials.

D. WT (Weaknesses-Threats)

1. Create a crisis management plan to mitigate risks associated with labor shortages and market fluctuations.
2. Establish formal organizational values and a strategic vision to unify the workforce and enhance internal management practices.

V. STRATEGIC PLAN

A. Sustainability of Resources

1. Implement programs to attract and train young artisans, ensuring the longevity of this craft.
2. Develop internal capabilities for producing batik stamp tools to reduce dependence on aging suppliers.

B. Management and Strategy Development

1. Clearly define the company's vision, mission, and core values to foster a strong organizational culture.
2. Establish long-term strategic goals that align with market opportunities and competitive dynamics.

C. Market Positioning

1. Enhance marketing efforts to promote batik products in new international markets, focusing on sustainability and cultural heritage.
2. Encourage collaborations with influencers and advocates of sustainable fashion to expand the customer base.

VI. RECOMMENDATIONS

To ensure the sustainability of the batik industry in Solo, it is essential to implement several recommendations. Firstly, developing comprehensive training programs for young individuals will equip them with the skills needed to master batik craftsmanship, thereby securing a skilled workforce for the future. By fostering interest in this traditional art form, the company can ensure a steady supply of artisans who can carry on this cultural heritage. Secondly, investing in technology and training for tool production will enable the company to manufacture its own batik stamp tools. This move will reduce reliance on external suppliers and enhance the company's operational efficiency. Additionally, creating a strategic marketing plan is vital. This plan should emphasize the cultural significance and unique qualities of batik, appealing to environmentally conscious consumers who value sustainable and artisanal products. Lastly, formulating a crisis management plan will help the company prepare for potential labor shortages and market fluctuations. By outlining clear responses to these challenges, the company can navigate uncertainties and maintain its competitive edge in the export market. Through these initiatives, the batik industry in Solo can thrive, preserving its rich heritage while ensuring its future growth and sustainability.

VII. CONCLUSION

The batik industry in Solo plays a crucial role in the national economy, making significant contributions to the textile and apparel sector, which is vital for the overall growth of the country. Despite its rich heritage and established presence in international markets, the industry faces considerable challenges, particularly concerning human resource sustainability, management practices, and strategic planning. The aging workforce poses a risk of labor shortages, exacerbated by the lack of interest among younger generations in pursuing careers as batik artisans. Furthermore, the absence of a clearly defined vision and mission, along with the lack of formalized organizational values, hinders the company's ability to create a cohesive corporate culture and establish a long-term strategic direction. To address these challenges and enhance its competitive position in the increasingly dynamic export market, the batik company must prioritize the development of a comprehensive long-term strategic plan. This plan should focus on fostering resource sustainability, nurturing the next generation of artisans, and establishing a clear organizational framework that articulates the company's vision, mission, and core values. By leveraging its strengths, such as the unique handcrafted quality of its products, and addressing its weaknesses through strategic initiatives like training programs for young artisans and partnerships with educational institutions, the company can cultivate a skilled workforce that ensures the continuity of this traditional craft. In conclusion, the implementation of effective strategic planning, supported by a robust TOWS analysis, will enable the batik company to respond effectively to market fluctuations, capitalize on emerging opportunities, and mitigate potential threats. With a

proactive approach to addressing internal weaknesses and embracing external opportunities, the company can not only secure its position in the international market but also contribute to the preservation of Indonesia's cultural heritage while driving sustainable economic growth in the region.

ACKNOWLEDGMENTS

The researcher expresses gratitude to the Indonesia Endowment Fund for Education (LPDP) from the Ministry of Finance, Republic of Indonesia, for funding the seminar and publication stages of this research. Additionally, thanks are extended to the PT. Batik Solo for granting permission for the research. Special appreciation is also extended to University of Gadjah Mada for providing guidance to students throughout the research process.
