The presentation is based on findings and achievements of Nature Based Solutions Teachers Academy Erasmus+ project. The idea is how to implement NBS in all levels of education in order to educate and prepare future citizens for actions. Some theoretical background is given from the beginning of NBS till present day. Based on theory, real examples and cases several practical issues are presented. NBS for biodiversity preservation and conservation, for abandoned buildings and constructions, for food and water waste, etc. Possible obstacles, barriers and difficulties in implementation of NBS in education are also commented.
